Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Hellow World
Project / Solution Name	FutureFit
Name (Leader)	LIENG YU HAO
Email & Phone (Leader)	hamyufalanbo@gmail.com
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://aligna-two.vercel.app/
Code Repository URL (public / access granted to judges)	https://github.com/YhKen/SDC_Hackathon_Hellow-World

2. Architecture & Technology Stack

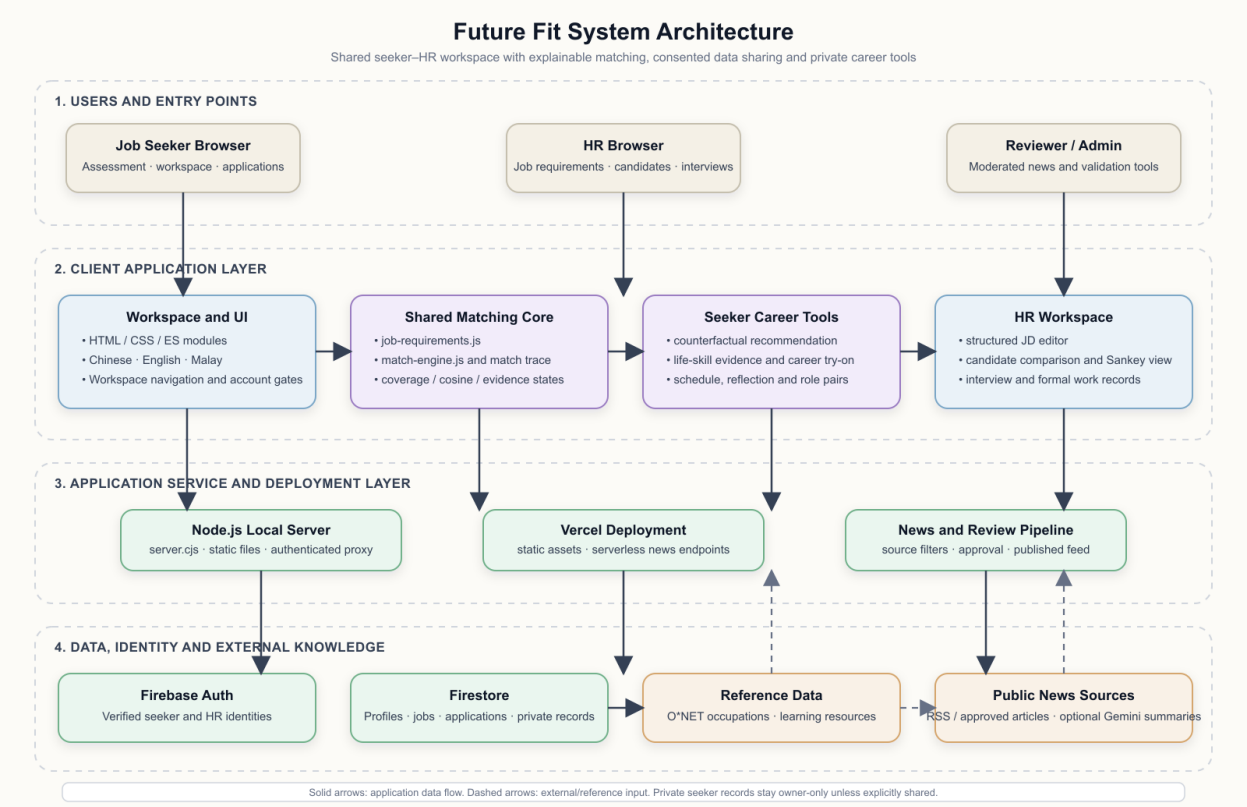

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Future Fit is a browser-based career exploration and hiring workspace for job seekers and HR users. The client is implemented with buildless HTML, CSS and ES modules, with shared navigation and three-language UI. Both roles use the same deterministic matching engine, structured job-requirement contract and traceable skill evidence so that a frozen job description and shared application produce consistent results on both sides.

The Node.js server serves the local prototype and forwards permitted authenticated requests to the existing production services. The deployed prototype uses static assets on Vercel and Firebase Authentication and Firestore for identities, profiles, jobs, applications, consented snapshots and owner-only seeker records. Firestore rules enforce role and ownership boundaries. Seeker-only tools include counterfactual recommendations, life-skill evidence, career try-outs, learning schedules, application reflection and combination-work planning. Public occupation and learning references are kept separate from personal records. A moderated news pipeline reads public sources, applies evidence and jurisdiction checks, and publishes approved trend information; it does not directly change matching scores. External news summarisation is optional and server-side.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
JavaScript ES Modules	Frontend logic, matching, career tools and interactions	ECMAScript standard
HTML5 / CSS3	User interface and responsive layout	Web standards
Node.js 24.x	Local server and development runtime	Node.js license
Firebase Web SDK 13.0.0	Authentication and Firestore access	Apache-2.0
Zod 4.6.7	Server-side schema validation for news data	MIT
Mammoth 1.13.0	DOCX resume/document text extraction	BSD-2-Clause
PDF.js 6.4.299	PDF resume/document parsing	Apache-2.0

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Firebase Authentication API	Account registration, login, email verification and identity validation	Firebase project quota
Cloud Firestore API	Store profiles, jobs, applications and private career records	Firebase project plan
Google News Public RSS	Retrieve public career and workforce news articles	Public / free
Google Gemini API	Server-side summarisation of public news articles	Free-tier configuration, subject to quota
Existing Future Fit API endpoints	News, validation, work-sample and authenticated application operations	Project-hosted API

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Vercel	Host static frontend assets and serverless API endpoints	Existing project; deployment region to be confirmed
Firebase Authentication	User authentication and verified accounts	Firebase project plan to be confirmed
Cloud Firestore	Database for user, HR, job and application records	Firebase project plan to be confirmed
Vercel Cron	Scheduled news synchronisation	Existing deployment configuration; confirm enabled status

Service & Provider	Purpose in Project	Plan / Region
Local Node.js server	Local prototype testing and authenticated API proxy	Local development only

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Gemini Flash-Lite, exact version to be confirmed	Google AI Studio / Google Gemini API	Pre-trained; optional server-side news summarisation	Google API and Free Tier terms
No trained matching model	Project-developed deterministic rules	Rule-based matching, career routing and scheduling	Project code

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
O*NET Occupational Reference Data 31.0	O*NET / USDOL	Public	CC BY 4.0 and applicable O*NET terms	N
O*NET Interest Profiler Short Form	O*NET	Public instrument/reference	O*NET Tools Developer License; confirm current terms	
Mini-IPIP item bank	IPIP / official reference source	Public instrument/reference	Confirm applicable IPIP terms	
Future Fit question and skill bank	Project-created/local	Self-created	Team-owned or project terms	
Synthetic candidate, job and task records	Project-created	Synthetic	Project-created	

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
User CVs, assessment responses and career records	Users / Firebase	Private runtime data	User terms and privacy policy	
Public news articles and RSS items	Public publishers / Google News RSS	Public runtime content	Publisher terms and links retained	

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☐ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
OpenAI ChatGPT GPT 5.6 Luna	Code review, implementation assistance, documentation and system architecture diagram	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI-generated code and documentation were reviewed and edited by team members before integration. The team ran syntax checks, automated tests, rule checks and manual browser checks where available. AI output was not treated as proof of correctness, professional validity or hiring probability. Team members remained responsible for selecting, modifying, testing and approving the final implementation. No passwords, API keys, tokens or private production credentials were provided to the AI tool

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☐ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Replit Core access and Replit Agent AI usage credits provided through the official SDC sponsorship programme	Our team redeemed the sponsor-provided Replit Core access and used Replit Agent for the initial prototype and AI-assisted interface exploration, including the early seeker workspace, skills overview and career exploration flows. The final implementation was later refined in the team's local repository and deployed through Vercel.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

The sponsor resource was valuable for rapid prototyping, AI-assisted interface exploration and early product iteration. However, it was not essential to the core functionality of the final product. The final implementation can run in the team's local Node.js environment and was deployed through Vercel.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The application collects verified account identifiers, email and profile data, CV content, assessment responses, challenge results, skills, job applications, consented shared snapshots, interview records and private career-tool records such as life-experience claims, reflections, availability, learning plans and income or shift options. Authentication and application data are stored using Firebase Authentication and Cloud Firestore. Firestore rules restrict private records to the signed-in owner. Employer access is limited to an active application and explicitly shared data, and withdrawal closes that access. Authentication tokens and permitted records are sent to Firebase and project API endpoints. The news summarisation service receives public article metadata and canonical skill names, not CVs or private reflections. The source code does not define one automatic retention period; the team must confirm and document its account and record deletion policy before submission.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Gemini summaries may hallucinate, misunderstand sources or become unavailable because of free-tier quotas. The news pipeline limits input to public article metadata and canonical skills, requires source quotes and date or jurisdiction checks, and sends uncertain or major items for review. Failed calls do not silently change matching results. Public RSS may be incomplete or stale, so an unavailable state is shown. The deterministic matching formulas are transparent but uncalibrated and must not be interpreted as hiring probability or verified competence. O*NET is an occupational reference rather than a complete Malaysian labour-market dataset, and the career try-outs are not professionally validated job simulations. Firebase, Vercel, browser compatibility, physical-device behaviour and high-scale capacity require further acceptance. Privacy risk is reduced through owner-only rules and explicit sharing, but deployment rules and retention policy must still be reviewed.

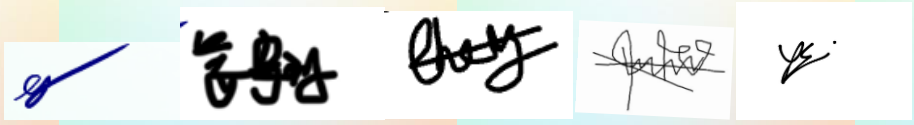

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- [x] All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- [x] All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- [x] No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- [x] Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- [x] Any use of official SDC sponsor resources has been declared in Section 5.
- [x] The prototype described here is accessible to judges through the links provided in Section 1.
- [x] All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
